Forecast for Monday 28 Jun 2021

Weather: Generally overcast with showery outbreaks of rain across the Brecon Beacons during Monday morning, some of the rain could prove rather persistent and locally heavy. The rain should ease somewhat during the course of the morning but it will remain cloudy with further outbreaks of mainly light rain and drizzle possible. Cloudy throughout the afternoon, perhaps with the odd brighter spell during the afternoon. Risk of a few isolated showers, with thunder during the afternoon.

Chance of cloud free mountain/hill tops above 600m: 20% throughout

Visibility: Low cloud and rain will give poor visibilities across the area during the morning, particular east of Pen y Fan. Cloud bases lifting to 600-700m during the afternoon, and with less persistent rain visibilities should improve but summits will remain prone to hill fog. However sudden deteriorations are possible in any showers.

Meteorologist's View

The combination of low cloud and persistent rain is likely to make conditions over the hills and mountains thoroughly miserable, with challenging navigation and walking conditions. Wet weather gear is a must if spending any time on the mountains. Conditions improve a little during the afternoon but there is a risk of thundery showers later.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Sat 26 Jun 2021	2.6mm	5mm	5.2mm

Forecast for Tuesday 29 Jun 2021

Weather: It will continue unsettled with cloudy conditions Tuesday morning, some brighter spells are possible but more so during the afternoon. There is a continued risk of outbreaks of showery rain throughout, the rain locally heavy with a risk of thunder.

Maximum wind: Northeasterly 10-15 mph, gusting 20mph near any showers.

Chance of cloud free mountain/hill tops above 600m: 60% increasing to 80% from early afternoon.

Visibility: Generally good, however early morning low cloud with bases 600-700 meters may give some early morning hill fog near summits. Visibilities improve during the morning, however developing showers may result in sudden deteriorations.

Temperature: **Valleys:** Plus 12 Celsius rising to plus 16 Celsius.
At 600m: Plus 9 Celsius rising to plus 14 Celsius.
Freezing level: Above Summits
